

Windows Forms kullanarak Graphical User Interface-2

Yrd. Doç. Dr. Özgü Can

LinkLabel

- Diğer kaynaklara olan bağlantıları gösterir.
 - Dosya
 - Web Sayfası
- **Label** sınıfından olduğundan, **Label** sınıfının tüm fonksiyonelliğini kalıtım yolu ile alır.

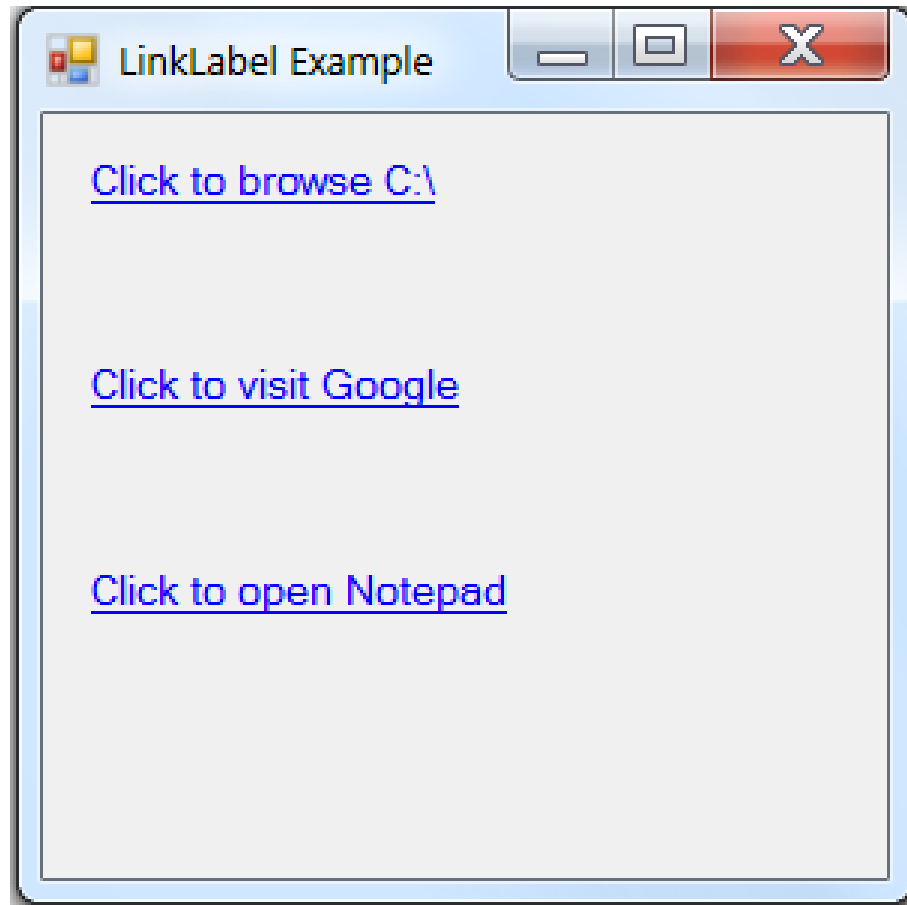

Örnek Uygulama - LinkLabel

Örnek Uygulama - LinkLabel

- 3 LinkLabel
 - LinkLabel 1
 - `Text = Click to browse C:\`
 - `Name = cDriveLinkLabel`
 - LinkLabel 2
 - `Text = Click to visit Google`
 - `Name = googleLinkLabel`
 - LinkLabel 3
 - `Text = Click to open Notepad`
 - `Name = notepadLinkLabel`

Örnek Uygulama - LinkLabel

Örnek Uygulama - LinkLabel

```
private void cDriveLinkLabel_LinkClicked(object sender, LinkLabelLinkClickedEventArgs e)
{
    // change LinkColor after it has been clicked
    cDriveLinkLabel.LinkVisited = true;

    System.Diagnostics.Process.Start(@"C:\");
}
```

Verbatim String

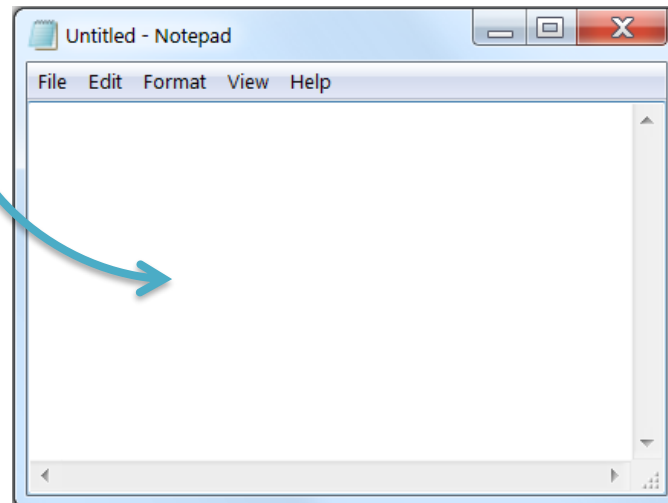

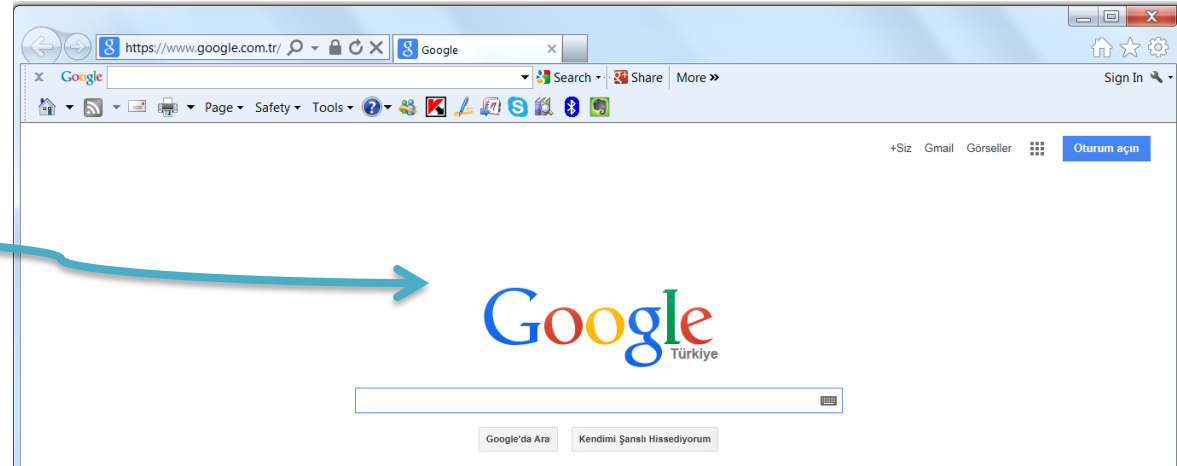

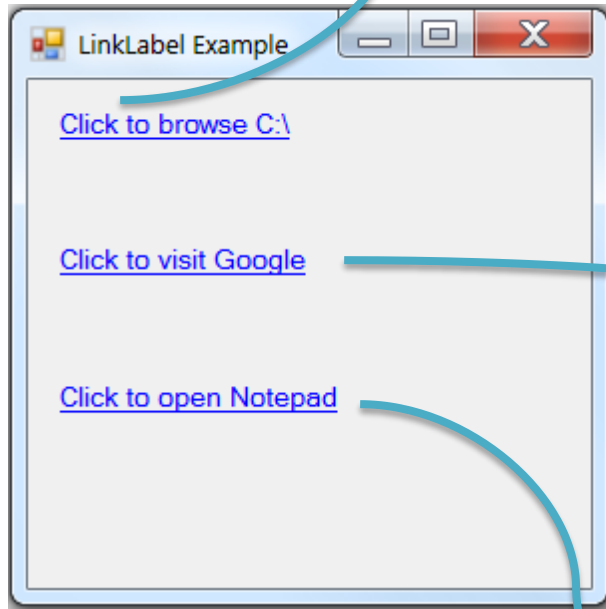

- Önüne eklendiği string'in literal olarak okunmasını sağlar.
- İlk ve son çift tırnak işaretleri arasındaki string'i olduğu gibi okur.
- Özel karakter ve dosya yolu belirtilirken kullanılır.

```
private void googleLinkLabel_LinkClicked(object sender, LinkLabelLinkClickedEventArgs e)
{
    // change LinkColor after it has been clicked
    googleLinkLabel.LinkVisited = true;

    System.Diagnostics.Process.Start("http://www.google.com");
}
```

```
private void notepadLinkLabel_LinkClicked(object sender, LinkLabelLinkClickedEventArgs e)
{
    // change LinkColor after it has been clicked
    notepadLinkLabel.LinkVisited = true;

    System.Diagnostics.Process.Start("Notepad");
}
```

ListBox

- Kullanıcının liste öğelerini **görmesini** ve **seçim yapmasını** sağlar.
- Statiktir.
 - Kullanıcı liste öğelerini değiştiremez.

ListBox properties, methods and an event	Description
---	-------------

Common Properties

Items	The collection of items in the <code>ListBox</code> .
MultiColumn	Indicates whether the <code>ListBox</code> can display multiple columns. Multiple columns eliminate vertical scrollbars from the display.
SelectedIndex	Returns the index of the selected item. If no items have been selected, the property returns -1. If the user selects multiple items, this property returns only one of the selected indices. If multiple items are selected, use property <code>SelectedIndices</code> .
SelectedIndices	Returns a collection containing the indices for all selected items.
SelectedItem	Returns a reference to the selected item. If multiple items are selected, it returns the item with the lowest index number.
SelectedItems	Returns a collection of the selected item(s).
SelectionMode	Determines the number of items that can be selected and the means through which multiple items can be selected. Values <code>None</code> , <code>One</code> (the default), <code>MultiSimple</code> (multiple selection allowed) or <code>MultiExtended</code> (multiple selection allowed using a combination of arrow keys or mouse clicks and <i>Shift</i> and <i>Ctrl</i> keys).
Sorted	Indicates whether items are sorted alphabetically. Setting this property's value to <code>true</code> sorts the items. The default value is <code>false</code> .

Common Methods

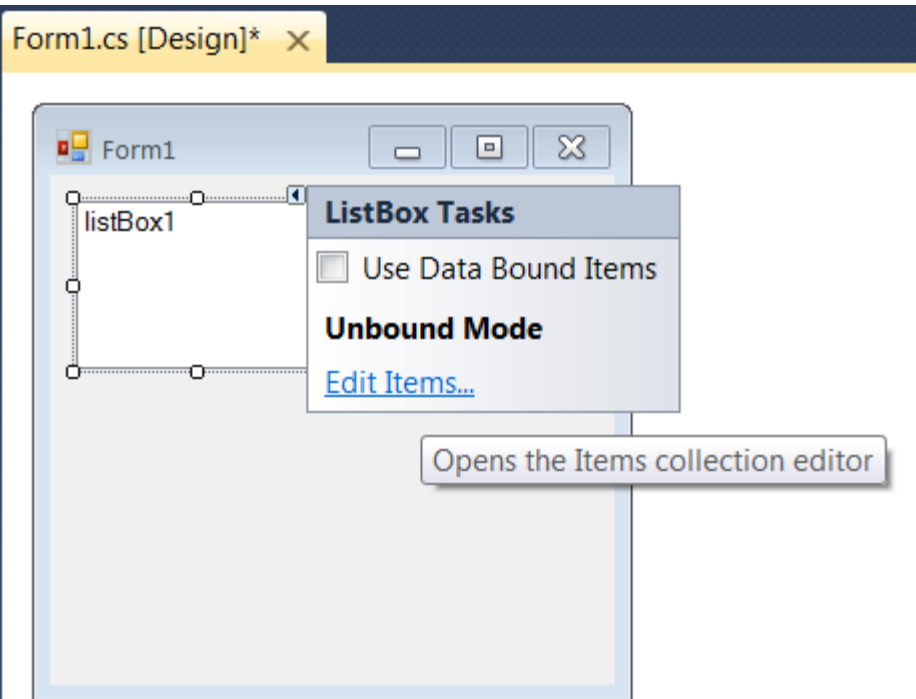

<code>ClearSelected</code>	Deselects every item.
<code>GetSelected</code>	Returns <code>true</code> if the item at the specified index is selected.

Common Event

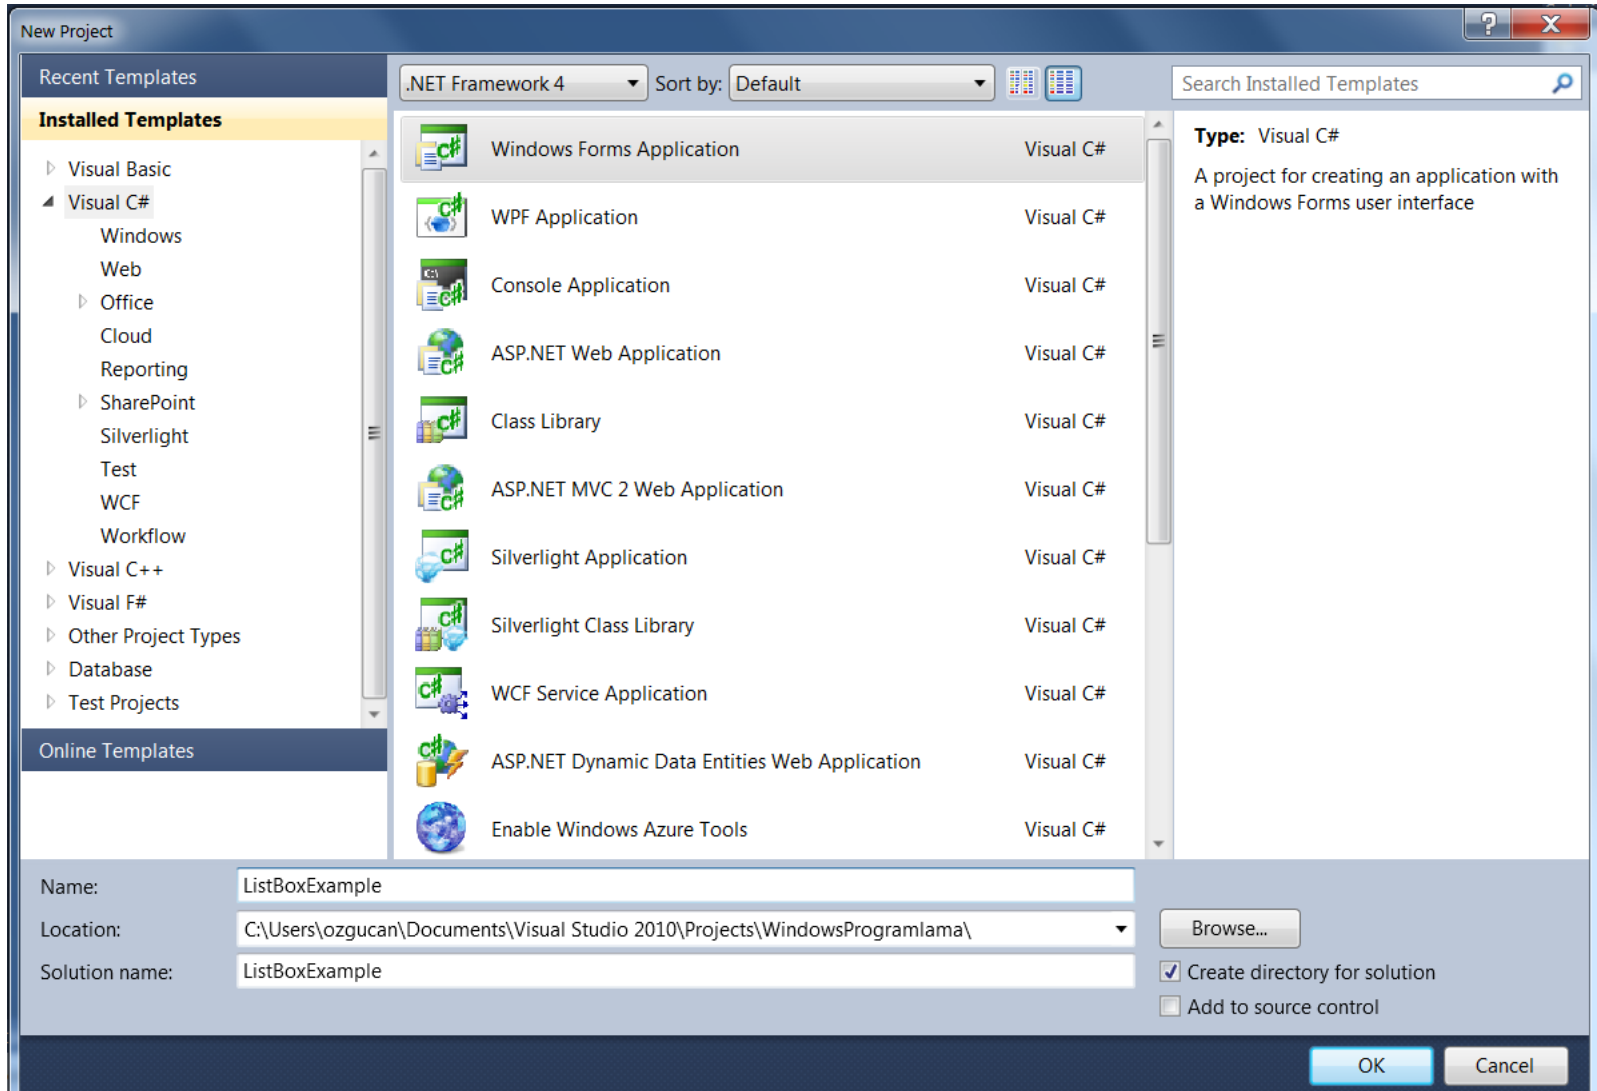

<code>SelectedIndexChanged</code>	Generated when the selected index changes. This is the default event when the control is double clicked in the designer.
-----------------------------------	--

ListBox

- ListBox'a öge ekleme:
 - **Add** metodu
 - **String Collection Editor**

CheckedListBox

- Her bir öğeyi yanında bir **CheckBox** ile görüntüler.
- Birden fazla öğe seçilmesine izin verir.
- **SelectionMode**
 - **One**
 - Tekli seçim
 - **None**
 - Seçim yok

CheckedListBox
properties, a method
and an event

Description

Common Properties

(All the ListBox properties, methods and events are inherited by CheckedListBox.)

CheckedItems

Returns the collection of items that are checked as a CheckedListBox.CheckedItemCollection. This is distinct from the selected item, which is highlighted (but not necessarily checked). [Note: There can be at most one selected item at any given time.]

CheckedIndices

Returns indices for all checked items as a CheckedListBox.CheckedIndexCollection.

CheckOnClick

When true and the user clicks an item, the item is both selected and checked or unchecked. By default, this property is false, which means that the user must select an item, then click it again to check or uncheck it.

SelectionMode

Determines whether items can be selected and checked. The possible values are One (the default; allows multiple checks to be placed) or None (does not allow any checks to be placed).

Common Method

GetItemChecked

Takes an index and returns true if the corresponding item is checked.

Common Event

(Event arguments ItemCheckEventArgs)

ItemCheck

Generated when an item is checked or unchecked.

ItemCheckEventArgs Properties

CurrentValue

Indicates whether the current item is checked or unchecked. Possible values are Checked, Unchecked and Indeterminate.

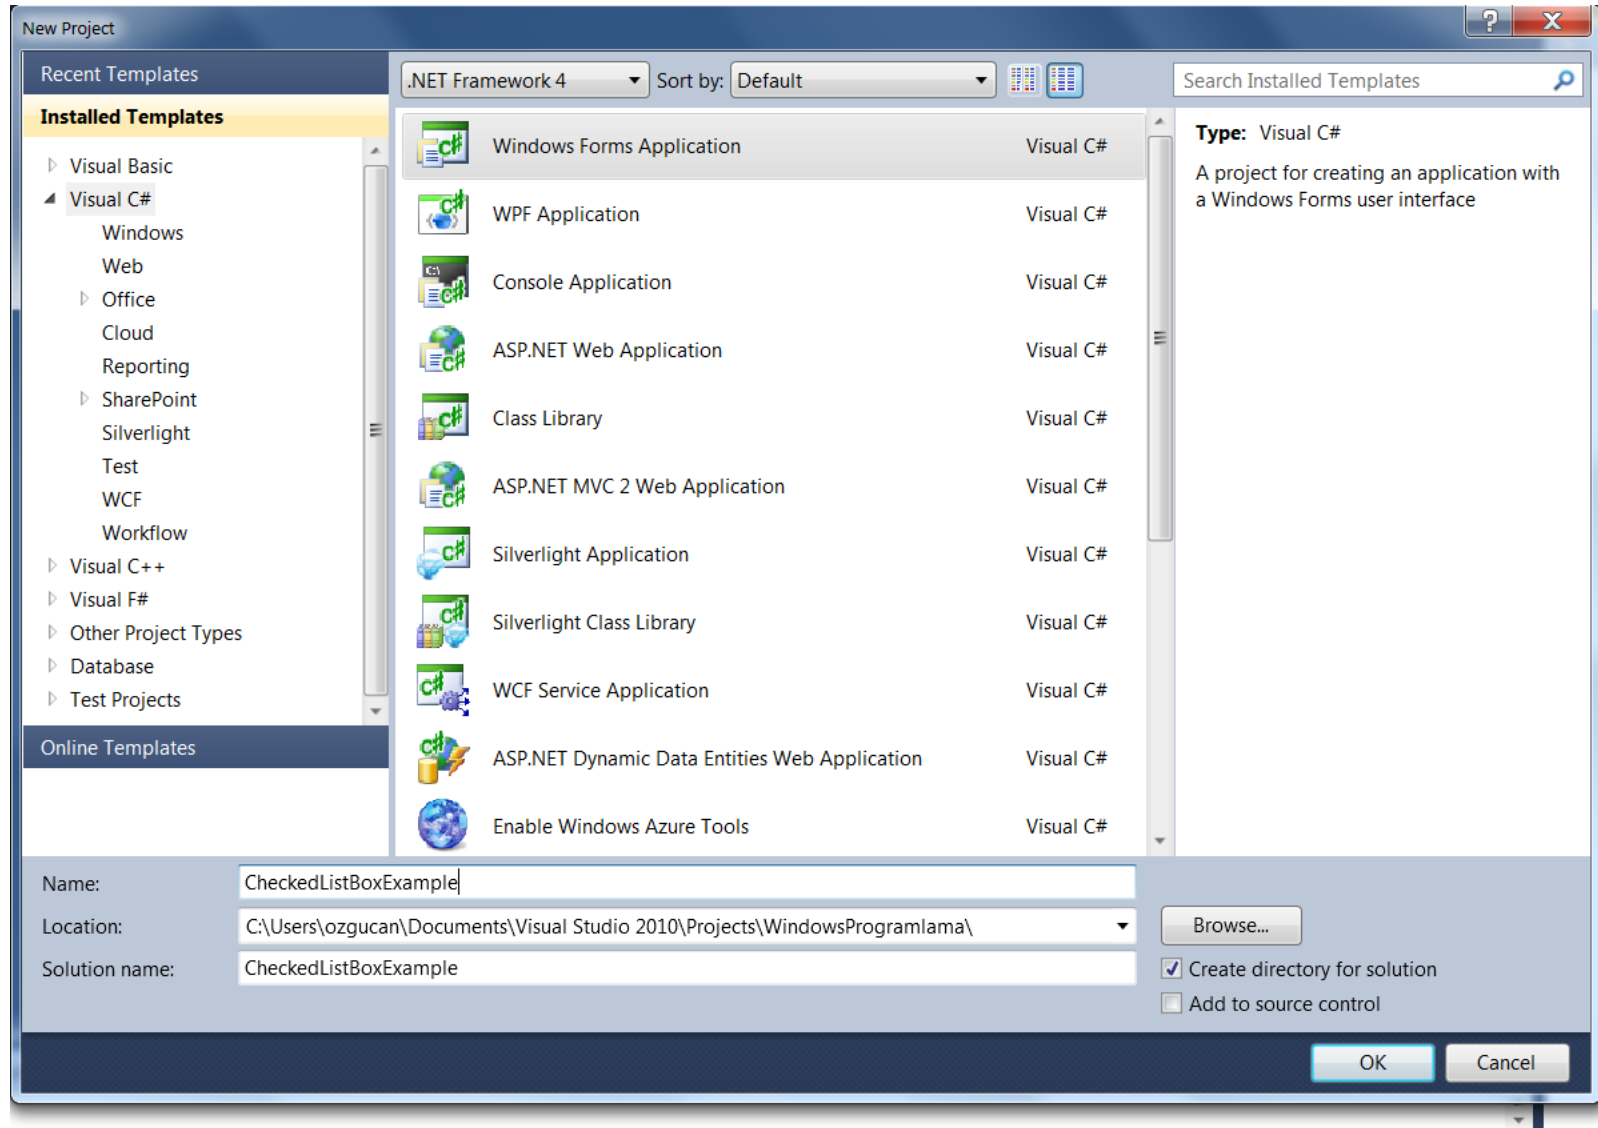

Index

Returns the zero-based index of the item that changed.

NewValue

Specifies the new state of the item.
